

Imaginators
Let's Imagine

Imaginators Overview

Imaginators is an online platform that helps people to create presentations just by dragging & dropping presentation's components. Users can customize the design and layout of their presentations along with adding animations & interactions from a wide-range of built-in tools.

Please refer to this link for more: about.imginators.com/about.

Problems & Solution

There are 3 major problems faces people while creating their presentations:

1. Wasting too many time & effort — it takes an average of 4 hours to create a presentation.
2. Poor design, especially if he/she has no experience in designing presentations.
3. Presentations are only text and images which lacks interactions and not attractive enough to the audience.

Therefore we created Imaginators to solve these problems by offering a presentations creator that works just by the dragging and dropping technology that saves too much time. This creator allow people to customize the design of the presentations with no need for any design skills, as well as adding animations and interactions with a click. The creator offers a wide range of built-in tools and advanced elements that can be easily added to the presentation.

Challenges

- Customizing Imaginators to fit our users' needs with the best user experience is our main challenge, that's why we scrapped two versions from the website before coming up with the first publicly published version.
- Keeping our customers satisfied is very important, that why we talk to them in personal on a monthly bases to collect feedback. We also offer multiple ways of support like live chatting service with a 5 minutes maximum waiting time.
- We're always working on ensuring a rapid growth for Imaginators to secure more customers and expand as fast as we can.

Business Model

Imaginators operates on "Freemium" business model where anyone can use the basic features for free, but by subscribing to a premium plan users can access the full power of the platform from advanced features in the creator, appears first in search results, access analysis dashboard, and much more.
